

BENEFITS OF OUR BUMBLEBEES

RELIABLE ADVICE

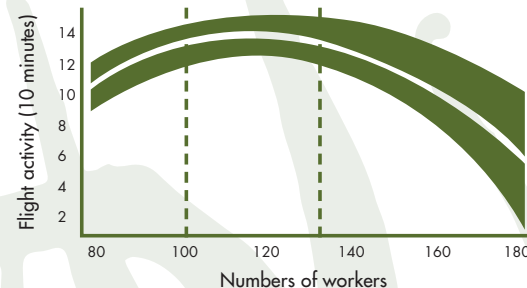

- ✓ In greenhouse vegetables and berry crops.
- ✓ Our (international) Biobest advisors in the field help you find the best natural solution for your crop.

WE FORECAST FOR QUALITY

- ✓ Our hives have a long lifespan
- ✓ It is all about flight activity

- ✓ No old hives thanks to our dynamic forecast system.
- ✓ Our hives are only shipped when the quality is right for our customer.

MEETING GROWERS NEEDS: TAILOR-MADE SOLUTIONS

- ✓ Many different type and size of hives adapted to each crop, situation and growing condition.

- ✓ Biobest in all weathers! Insulated boxes for outdoor crops and a ventilation system for higher temperatures.
- ✓ Flying Doctors System: bumblebees do all the work. They spread the biopesticides or pollen in the crop while pollinating.
- ✓ Save on your transport costs with our pollen tray. We can ship younger hives which can be stocked longer.

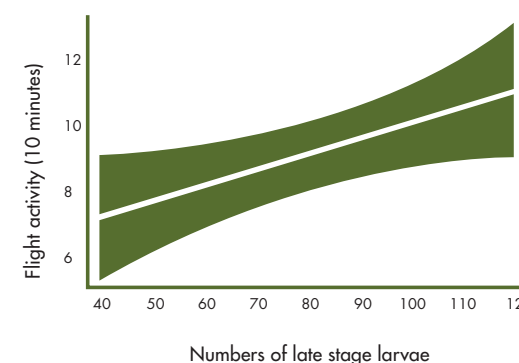

BUMBLEBEE PIONEER SINCE 1987: CONTINUOUS IMPROVEMENT

- ✓ Proud to be the first to produce bumblebees on a commercial scale and still actively looking for new methods to improve.
- ✓ Why purple and green hives? A better beevision to help bumblebees find their way back to the hive.

- ✓ More larvae need more pollen! Workers fly out more often, are more active and consume less sugar water then when staying inside the hive.

RICHNESS OF LOCAL SPECIES

Bombus atratus queen

Bombus impatiens queen

Bombus canariensis queen

Bombus ignitus queen

Bombus terrestris queen

Bombus terrestris audax queen

Bombus ephippiatus

Bombus huntii

We produce different species for local markets:

- ✓ 8 different bumblebee species
- ✓ 8 production locations on 4 continents, producing close to the market
- ✓ With respect for biodiversity
